Frontend-Developer: Despite being a beginner in the field, I am enthusiastic and quick to learn. I have completed projects that showcase my creativity and passion for front-end development. I am ready for challenges and continuous growth, and I look forward to working in an inspiring environment that offers personal and professional development opportunities. I am studying at the Syrian Virtual University as a second-year student majoring in Information Technology, where I have developed strong academic skills in web front-end development.

Experience

Training project for an iPhone 11 advertisement using HTML, CSS, JavaScript:

This training project is a web page I developed using HTML, CSS, and JavaScript to showcase an advertisement for the iPhone 11 Pro Max. Users can select their preferred phone color from a dropdown menu, and upon selecting the desired phone, its color is displayed on the screen along with a background color change to match the selected color.

Creative Hover Menu Effect

I developed a website featuring a floating menu using HTML and CSS, incorporating visually appealing effects like scaling and color changes on hover to enhance user experience. The project improves interaction and visual appeal with a responsive and modern design.
